

Quick Start Guide

How to Connect and Operate your AiProGuard dashcam

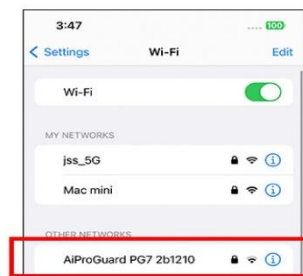

AiProGuard Dashcams

Welcome to **Digital Works' AiProGuard** Dashcam - An advanced automotive, smart and reliable security surveillance system for your vehicle. Featuring full HD wide-angle front and rear cameras that automatically capture and record continuous critical driving events such as road accident, as well as parking monitoring evidence of break-ins or vandalism when you're away from your vehicle. It is equipped with an auto-looping function, allowing old and unused footages to be overwritten automatically when the Samsung ultra-fast memory card is full. The dashcam also features a smart battery protection management to prevent undesirable car battery drain for a trouble-free and maintenance free operation as much as possible.

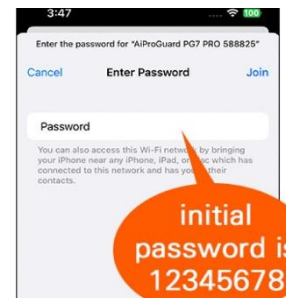

Connecting your smartphone to the **AiProGuard** dashcam through Wi-Fi Direct technology, without needing to connect to a network or internet lets you view live stream, download and share all the recorded files directly to your phone from the **AiProGuard** IOS or Android app. Think of it similar to Bluetooth connection but operating and sharing data at a much faster Wi-Fi speed.

1. From the **Apple AppStore** or **Google Play Store**, search, download and install the **AiProGuard** free App to your smartphone. Close the app if it is opened.

2. Start your car and wait till you hear the dashcam making activation notification. Open setting on your smartphone and ensure WiFi is enabled.

3. Select Wi-Fi from your smartphone settings, locate SSID with prefix Wi-Fi name "AiProGuard", connect and enter the default password "12345678" to establish connection.

4. Locate and run the **AiProGuard** app on your smartphone. Follow onscreen instructions to watch dashcam live stream videos or access and download recorded files directly to your phone as required.

5. A User Guide in PDF of your **AiProGuard** dashcam model is available for download at:
